

Where questions are lost

One row per stage an answer must survive, over the 10 scored relation questions. Read top to bottom.

SCOPE bookkeeping over already-scored outcomes, not a new measurement. The held tile is identity_oracle — a BOUND, not performance. n = 10 over two rooms.

Held by the representation, versus reached by a deployable path

Extraction is not the loss: no question is lost at the serialized-edge stage. Identity grounding is where they go.
